AIRA K. SALISH

Chennai, India | +91 70343 77607 | airasalish@gmail.com | linkedin.com/in/airasalish | github.com/airasalish | portfolio: aira-salish.vercel.app

AI Generalist, Design | Industrial Design, Bangalore | 6 months, full-time, available immediately

SUMMARY

Removing friction from someone else's workflow is work I have already done. At a content platform the complaint was that output was slow; the real cause was a set of mechanical steps repeated for every piece, invisible because each took only minutes. I watched how the work actually happened rather than how people described it, then built Python and n8n automation across 50+ workflows that **removed 40% of the team's recurring manual effort**. The diagnosis mattered more than the automation.

I have shipped with generative AI, not only experimented with it. I produced AI-generated video end to end with tools **including Runway**, and built the **prompt system that held characters, scenes and styles consistent across an entire series — 100M+ combined views**. Holding a visual language constant while everything else changes is the hard part of generative work, and it is the same problem an Industrial Design and **CMF** language poses.

I deploy what I build, and write the tutorial that gets it used. Self-serve dashboards colleagues run without me, an **operating playbook adopted team-wide**, and an open source app with **1,000+ daily users**. A tool nobody adopts is not a solution.

EDUCATION

SRM Institute of Science and Technology, Chennai, India Expected 2027

B.Tech, Computer Science and Engineering (Artificial Intelligence and Machine Learning)

Availability: Coursework complete. Open to relocating to Bangalore, full-time for the 6-month duration, available immediately.

WHAT I BRING TO THIS ROLE

Problem Identification: Proactively observing how people actually work; separating the stated complaint from the real bottleneck

AI Tool Exploration and Testing: Generative image and video tools including Runway; LLM APIs, agents, RAG; rubric-based evaluation against real use

Solution Design and Tool Building: Python, JavaScript, SQL, shell; prompt systems for character, scene and style consistency

Workflow Integration: n8n and Python automation across 50+ concurrent production workflows; asset pipelines; health monitoring

Application Deployment: Web apps, prototypes and internal utilities on AWS and Vercel; FastAPI, Node.js, React, Next.js, Docker, CI/CD, Linux (RH294)

Process Documentation: Tutorials, playbooks and best practices written for the non-technical people who use the tool

Data-Driven Insights: Measuring how work actually gets done; self-serve dashboards; SQL querying and optimisation

Collaboration and Presentation: Cross-functional teams; reporting findings to founders; defending a design in a live 30-minute review

Currently learning: Computational and generative design tooling, advanced rendering engines

EXPERIENCE

Prompt Engineering and Automation Intern **May 2025 - Sept 2025**

BabyBillion, kids content platform, 1.5B+ monthly views; under Dinesh Godra, ex-VP Unacademy *Bengaluru, Hybrid*

- Produced **AI-generated short-form video end to end**, and built the **prompt system that kept characters, scenes and styles consistent across an entire series**, iterating against measurable targets — **100M+ combined views; top pieces at 25M, 21M and 20M**.
- **Found the repetitive work nobody had named**, then built **Python and n8n automation across 50+ concurrent production workflows**, **removing 40% of the team's recurring manual effort**, with an organised asset pipeline behind it.
- **Sped up reporting by 30%** and built **self-serve dashboards**, with the playbook that got them adopted.

Generative AI Researcher **Dec 2025 - Feb 2026**

The Spotted App, product team under Amit Baradia, BeSuperhuman.ai *Remote*

- **Tested AI output rigorously against real use**: built the rubric-based test sets, labelled regression suites and reproducible failure cases a production system was measured against, and **defined the quality metric** itself — **incorrect production responses fell 35%.**
- Wrote an **operating playbook of recurring failure modes that the team adopted**, and reported findings **directly to the founders**.

PROJECTS

THROUGHLINE, Design-Language Consistency Engine | Python, FastAPI, generative image APIs **Early build, 2026**

- **The problem:** generative tools break a design language on every output, from ideation to visualisation. **What I am building:** reference images and written rules — proportion, stance, form, and colour, material and finish (**CMF**) — compiled into a versioned spec and injected into each generation, so a designer asks for a new silhouette instead of rewriting a 200-word prompt.
- Concepts are then scored against that spec so the tool reports **which rule was broken**, with accept and reject decisions logged. **Early build — I would rather show what it currently fails at than call it finished.**

DRIFT, Deployed Full-Stack Platform | FastAPI, SQLAlchemy, PostgreSQL, React **2026**

github.com/airasalish/drift | *live demo* | *technical video*

- Built and **deployed end to end** so anyone can open it: **191 commits, 121 tests across 6 files all passing**, a dated log of **20+ decisions and defects fixed**, and **five limitations published openly**.

LOG-SEISMO, Server Log Monitoring and Anomaly Detection | Python, deployed on AWS **2026**

- **An internal utility, built and deployed on AWS**: monitoring over server logs that surfaces anomalous behaviour instead of leaving it buried in volume.

CampusWeb, SRM Student Application | Open source contribution **2024**

- **Extended an unfamiliar codebase written by others** to ship features to a live app with **1,000+ daily users**, under **peer code review and maintainer guidance**. Also a contributor to **GirlScript Summer of Code 2025**.

CERTIFICATIONS AND ACHIEVEMENTS

Red Hat Certified Specialist, RH294 (2026) | AWS Certified AI Practitioner (2026) | SAP Back-End Developer, ABAP Cloud (2026)

Peak rank **#27**, HackerRank Orchestrate, and invited to **HackerRank Earn** | Top 5% of 1,200+, CitiBridge 2026, Citibank | State Finalist, OpenAI and NxtWave Buildathon | Technical Lead, AI/ML, ACM-W SRMIST
